

# BEETLE /iPOS

## TECHNICAL DATA

### System management

With more than 25 years of experience, we have first-hand knowledge of customer demands for high system availability, stability and continuity, as well as for low running costs. We put particular emphasis in this respect on total cost of ownership (TCO), i.e. the total cost of a product over its lifecycle. The systems are management ready and support software distribution, inventory management or remote administration by current IT management solutions such as Tivoli™.

### Peripherals

All the BEETLE models are open system platforms for state-of-the-art, best-of-breed POS solutions and support requirements for the very highest modularity. In this regard, we offer an extensive selection of retail peripherals such as POS printers, barcode scanners, line displays, cash drawers, POS keyboards, etc. Our product portfolio consists of in-house developments and OEM products, and offers everything needed for a professional, freely configurable POS solution.

### Communication

The BEETLE /iPOS is equipped as standard with a 10/100 Mbit Ethernet Twisted Pair interface. A radio LAN can be optionally used. A conventional modem can be connected to the standard interfaces for a WAN or an integrated ISDN sub-module.
